RPC – Bebo B2Nature™

barrier to nature

Certified compostable coffee capsule with O₂ flavour barrier

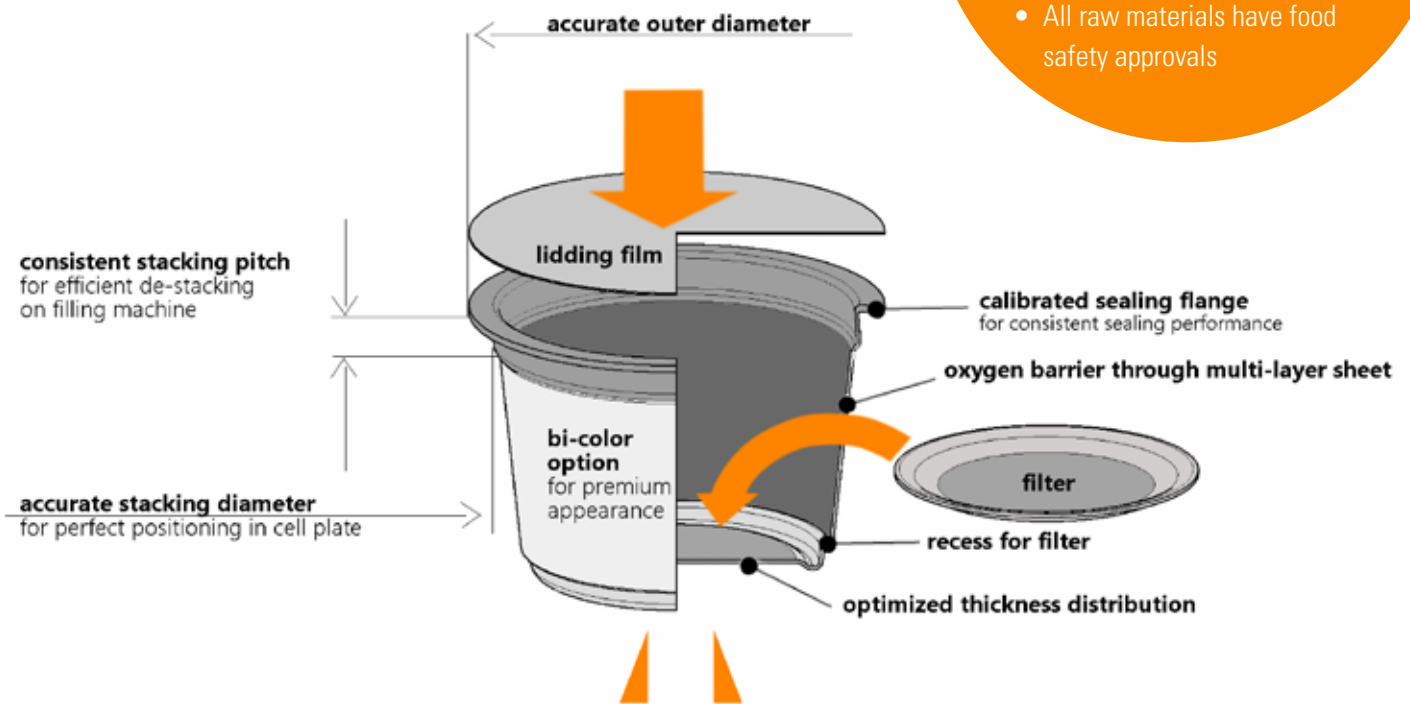

PRODUCT DESCRIPTION

The Sustainable Way to Enjoy Coffee

- Compost is a valuable substance! It's a sustainable way to dispose of small portion packs such as coffee capsules which contain the full amount of organic waste that cannot be collected separately from the packaging material.
- Furthermore, coffee assists the composting process as it provides valuable nutrients to the compost and improves the nature of the soil.
- Now a flavour-saving barrier pack has been developed that meets all the requirements of today's high-pressure coffee machines while providing an efficient end of life solution through industrial composting. The packaging **goes**. The flavour **stays**.
- RPC Bebo B2Nature is the sustainable option for coffee capsule consumption and disposal.

Main benefits of RPC Bebo B2Nature™

- Material suitable for industrial composting (certifiable)
- Excellent O₂ and flavour barrier
- Outstanding sealing and welding properties
- All raw materials have food safety approvals

Visual Composting Results

After a composting duration of 10 weeks only a minor amount of capsule material is left due to efficient decomposition.
